

Figure 1

Figure 1 consists of two panels, (a) and (b), showing the evolution of the normalized velocity autocorrelation function $\langle v(t)v(0) \rangle / \langle v^2 \rangle$ as a function of time t in units of τ_B . Panel (a) shows results for $N = 64$, and panel (b) shows results for $N = 128$. Both panels include experimental data points (circles) and theoretical predictions from the Ornstein-Zernike equation (solid line). The curves show a characteristic decay from 1.0 at $t=0$ towards zero, with some oscillatory behavior observed in the experimental data.
